AFFIDAVIT

DISTRICT OF COLUMBIA) ss:

ROBERT A. FRAZIER, being duly sworn, deposes and says:

1. I am 49 years old and I reside in Hillcrest Heights, Maryland.

2. I obtained a Bachelor of Science Degree from the University of Idaho in 1940. I have been a Special Agent of the Federal Bureau of Investigation since December 1942. I am Chief of the Firearms Unit of the Physics and Chemistry Section of the Federal Bureau of Investigation Laboratory in Washington, D. C. I have been assigned to the Firearms Unit continuously since June 9, 1941. I received the specialized training program in firearms identification of approximately one year duration from the Federal Bureau of Investigation when I was initially assigned to the Firearms Unit. Since being assigned to this unit I have made thousands of comparisons of bullets and cartridge cases with the firearms for the purpose of determining whether a particular firearm fired a bullet or cartridge case. I have testified on numerous occasions in federal and state courts, as well as in military courts martial, as a firearms identification expert witness.

3. On April 5, 1968, at the Federal Bureau of Investigation Laboratory, I received certain items of evidence from Robert Fitzpatrick, Special Agent of the Federal Bureau of Investigation who had brought

had [illegible]

of [illegible]

day.

[illegible] submitted [illegible]

.30 [illegible]ield [illegible]ington rifle, [illegible]

serial [illegible]ber 561476, with clip, and a Peterson [illegible]

scope [illegible], serial [illegible]. I also [illegible] from

Special [illegible] Metropolitan [illegible] .30 caliber steel-jacketed

"soft-point sporting [illegible] Remington-Peters bullet, an

expended .30-06 Springfield caliber Remington-Peters cartridge

casing, and a Peters cartridge box, bearing manufacturer's

[illegible]ber 2033 containing also unfired .30-06 Spring-

field caliber Remington-Peters cartridges and [illegible] marked

.30-06 Springfield caliber U. S. military cartridges con-

taining full metal-jacketed bullets.

I determined from microscopic examination that

the recovered .30 caliber steel-jacketed rifle bullet had

been fired from a barrel rifled with six lands and grooves,

right twist. As a result of my examination of the sub-

mitted rifle I determined that it produced general rifling

impressions on fired bullets having the physical characteris-

tics of those on the submitted bullet. I also determined

that the submitted bullet was a 150-grain soft-point

bullet identical to the bullets in the five Remington-

Peters cartridges contained in the submitted Peters cart-

ridge box.

6. Because of distortion due to mutilation and

insufficient marks of value, I could draw no conclusion

as to whether or not the submitted bullet was fired from

the submitted rifle.

[illegible] Spr[illegible] gain[illegible] been-

tera[illegible] case [illegible] tified by [illegible] having [illegible] been [illegible] and e[illegible] from t[illegible] itted rifle. [illegible] inati[illegible] ed on e[illegible] ison of the [illegible] ing [illegible] of the [illegible], bolt [illegible] and [illegible] ractor [illegible] the cart[illegible] by the rifle. Based [illegible] charact[illegible] ics, I determined that the [illegible] ct was of [illegible] that the manufacturer [illegible] the [illegible] rtridge case to produce [illegible] similar to the Remington-Peters cartridges [illegible] the [illegible] ridge box.

ROBERT A. FRAZIER
